

WHAT IS CLAIMED IS:

- 1 1. A connection structure, comprising:
 - 2 a connector, having an inner side face defining a
 - 3 chamber formed with an opening;
 - 4 a module body, inserted from the opening to be
 - 5 accommodated in the chamber;
 - 6 a first conductive member, provided on an outer
 - 7 periphery of the module body which is opposed to the inner
 - 8 side face of the connector in a case where the module body is
 - 9 accommodated in the chamber; and
 - 10 a second conductive member, provided on the inner
 - 11 side face of the connector, such that the first conductive
 - 12 member is brought into contact with the first conductive
 - 13 member in a case where the module body is plenarily
 - 14 accommodated in the chamber.
- 1 2. The connection structure as set forth in claim 1,
2 wherein the second conductive member is extended in a
3 direction parallel to an inserting direction of the module body.
- 1 3. The connection structure as set forth in claim 1,
2 wherein the module body is a memory module.
- 1 4. The connection structure as set forth in claim 1,
2 wherein the module body is a camera module;
- 1 5. The connection structure as set forth in claim 1,
2 wherein an end of the chamber opposite to the opening is
3 made open.
- 1 6. The connection structure as set forth in claim 1,
2 wherein at least a pair of the second conductive member is

3 arranged on the inner side face of the connector so as to
4 oppose to each other.

1 7. The connection structure as set forth in claim 6,
2 wherein the second conductive member has elasticity.
